Research Summary

Interlinings and linings are textile materials used in the construction of garments and other textile products to provide structure, support, and finishing. Interlinings are layers of fabric inserted between the outer fabric and lining to add stiffness, shape, and durability to specific areas of a garment, such as collars, cuffs, or waistbands. They can be fusible, meaning they adhere to the fabric with heat, or sew-in, requiring stitching to secure them in place. Linings, on the other hand, are inner layers of fabric used to finish the inside of garments, providing a smooth and comfortable surface against the skin. Linings can add opacity, improve the drape of the garment, and enhance overall garment comfort. Both interlinings and linings play essential roles in the construction and finishing of high-quality apparel, contributing to the structural integrity, aesthetic appeal, and wearability of the final product.
