### Research Summary

An Intermittent Pneumatic Compression (IPC) device is a medical tool designed to improve circulation in the limbs by applying intermittent pressure to the extremities. This device typically consists of inflatable sleeves or cuffs that wrap around the legs or arms, connected to a pump. The pump inflates and deflates the cuffs in a rhythmic pattern, creating a massage-like effect that helps enhance blood flow and reduce swelling. Intermittent Pneumatic Compression is often used in the prevention and management of conditions such as deep vein thrombosis (DVT), lymphedema, and venous insufficiency. The rhythmic compression encourages the movement of fluids in the circulatory and lymphatic systems, aiding in the prevention of blood clots and reducing fluid buildup in tissues. It is commonly utilized in hospital settings, rehabilitation centers, and home care to promote vascular health and manage certain medical conditions.

The major global manufacturers of Intermittent Pneumatic Compression (IPC) Device include ArjoHuntleigh, Zimmer Biomet, Breg, DJO, Devon Medical Products, Cardinal
