Research Summary

Internal Mould Release Agent (IMR) is a chemical substance added to a material during its manufacturing process to facilitate the release of the finished product from the mold or die. Unlike external mold release agents that are applied to the mold surface, IMR is incorporated directly into the material formulation. It acts as a lubricating agent between the molded material and the mold surface, preventing adhesion and promoting easy release. IMRs are commonly used in the production of various molded products, including plastics, rubber, and composites. The use of internal mold release agents contributes to improved demolding efficiency, reduced cycle times, and enhanced surface finish of the final product. Manufacturers often choose IMRs based on the specific material being processed and the requirements of the molding process to optimize production and ensure the quality of the molded items.

The major global manufacturers of Internal Mould Release Agent (IMR) include Chem-Trend, AXEL, Chukyo Yushi, Marbocote, Franklynn Industries, Technick Products,
