Research Summary

Internal nasal dilators are medical devices designed to improve airflow through the nasal passages by mechanically dilating or opening the nostrils from the inside. These devices are inserted into the nostrils and work by supporting the nasal walls, preventing collapse during breathing. Internal nasal dilators are often used to alleviate symptoms associated with nasal congestion, snoring, and mild to moderate obstructive sleep apnea. They can be made from various materials, including silicone or polymer, and come in different shapes and sizes to suit individual comfort. Unlike external nasal strips that adhere to the outside of the nose, internal nasal dilators address airflow obstruction internally. The use of internal nasal dilators may help reduce nasal resistance, enhance breathing, and provide relief for individuals experiencing nasal congestion or breathing difficulties.

The major global manufacturers of Internal Nasal Dilators include Rhinomed Limited, SnoreCare, SANOSTEC CORP, Splintek, McKeon Products, Nasanita, RespiFacile, ZenSleep, Scandinavian Formulas, Nasal-Air Corp., WoodyKnows, etc. The global
