### Research Summary

Interposer and Fan-Out Wafer Level Packaging (FO-WLP) are advanced semiconductor packaging technologies that enhance the integration and performance of microelectronic devices. An interposer is a substrate that acts as an interface between different semiconductor components, allowing them to be connected and integrated into a single package. Fan-Out Wafer Level Packaging, on the other hand, is a packaging technique where the semiconductor components are redistributed over a larger area on the wafer, providing more space for connections and reducing the overall size of the package. When combined, Interposer and Fan-Out WLP allow for the integration of diverse chips, such as processors and memory, in a compact and efficient manner. This technology is commonly used in applications where high performance, miniaturization, and enhanced connectivity are critical, such as in mobile devices, networking equipment, and high-performance computing systems.

The major global suppliers of Interposer and Fan-Out WLP include TSMC, ASE Global, JCET, SPIL, Amkor, Murata, PTI, Nepes, UMC, Samsung Electro-Mechanics,
