Research Summary

Interventional cardiology is a specialized medical field focused on diagnosing and treating cardiovascular diseases using minimally invasive procedures guided by medical imaging. Cardiologists specializing in interventional cardiology employ a range of catheter-based techniques to intervene in the coronary and peripheral arteries, as well as the structural components of the heart. Common interventional procedures include angioplasty, stent placement, atherectomy, and transcatheter valve replacement. These procedures are performed through small incisions or catheters, reducing the need for open-heart surgery. Interventional cardiology plays a crucial role in the management of conditions such as coronary artery disease, heart valve disorders, and peripheral vascular disease, providing patients with effective and often less invasive alternatives to traditional surgical approaches. The field continues to advance with the development of innovative technologies and techniques aimed at improving patient outcomes and minimizing recovery times.

The major global manufacturers of Interventional Cardiology include Medtronic, Boston

Scientific Corporation, Abbott Vascular, MINVASYS S.A.S., BIOTRONIK SE and Co. KG, Bard Peripheral Vascular, TERUMO CORPORATION, KANEKA, OrbusNeich Medical, Cordis Cashel, Kimal Plc, Volcano Corporation, Siemens Medical Solutions USA, Lepu, MicroPort, etc. The global players competition landscape in this report is divided into three tiers.
