Research Summary

Interventional pulmonology devices are specialized medical instruments used in the field of interventional pulmonology, which focuses on the diagnosis and treatment of diseases affecting the respiratory system. These devices are designed for minimally invasive procedures that involve the use of bronchoscopes and other tools to access and treat conditions within the lungs and airways. Common interventional pulmonology procedures include bronchoscopy, endobronchial ultrasound (EBUS), bronchial thermoplasty, and airway stent placement. The devices used in interventional pulmonology enable physicians to visualize, biopsy, and treat lung lesions, tumors, and other pulmonary disorders without the need for more invasive surgical procedures. Interventional pulmonology plays a crucial role in improving diagnostic accuracy and offering therapeutic options for patients with lung cancer, airway obstructions, and various respiratory conditions.
