Research Summary

Interventional radiology products are specialized medical devices and equipment used in the field of interventional radiology, a medical subspecialty that employs minimally invasive techniques guided by medical imaging to diagnose and treat various conditions. These products include catheters, guidewires, angiography systems, embolization devices, and other tools designed for procedures such as angioplasty, embolization, stent placement, and image-guided biopsies. Interventional radiology allows physicians to access and treat targeted areas within the body using small incisions or catheters, reducing the need for traditional open surgeries. The use of these products enables precise and effective interventions for conditions such as vascular diseases, tumors, and blockages in blood vessels. Interventional radiology continues to advance with the development of innovative products, enhancing its role in providing less invasive alternatives for diagnostic and therapeutic interventions across various medical specialties.

The major global manufacturers of Interventional Radiology Products include Medtronic,

Boston Scientific, Abbott Vascular, Cordis Corporation, Becton, Dickinson, B.
