Research Summary

Intraocular Lenses (IOLs) are medical implants used in ophthalmic surgery to replace the eye's natural crystalline lens when it becomes cloudy or is removed during cataract surgery. These artificial lenses are designed to restore clear vision by focusing light onto the retina. IOLs come in various types, including monofocal, multifocal, and toric lenses, each addressing different aspects of vision correction. Monofocal IOLs provide clear vision at a single distance, while multifocal IOLs offer the ability to focus at multiple distances, reducing the dependence on glasses. Toric IOLs correct astigmatism, providing sharper vision for individuals with this refractive error. The implantation of IOLs is a common and well-established procedure, contributing to the success of cataract surgery and improving patients' visual outcomes.

The major global manufacturers of Intraocular Lens (IOLs) include Alcon, Rayner, Bausch & Lomb, AMO (J&J), HOYA, Physiol, CARL Zeiss, MossVision, OPHTEC, VSY Biotechnology, HumanOptics, Cristalens, SAV-IOL, STAAR Surgical, Medicontur, InfiniteVision Optics, etc. The global players competition landscape in this report is
