Research Summary

An intraoral dental imaging system is a diagnostic tool used in dentistry to capture detailed and high-resolution images of the inside of the mouth. This system typically includes digital sensors or intraoral cameras that can be inserted into the patient's oral cavity to capture images of the teeth, gums, and other oral structures. The digital nature of these imaging systems allows for immediate visualization on a computer screen, aiding dentists in diagnosing dental conditions, planning treatments, and educating patients about their oral health. Intraoral dental imaging systems have largely replaced traditional film-based X-rays, offering the advantages of reduced radiation exposure, faster image acquisition, and the ability to easily store and retrieve digital images. These systems play a crucial role in preventive and restorative dentistry, providing dentists with valuable information to deliver optimal and personalized care to their patients.

The major global manufacturers of Intraoral Dental Imaging System include Envista Holdings, Dentsply Sirona, Vatech, Planmeca, Carestream Dental, Morita, Yoshida, Air Techniques, Midmark, Asahi Roentgen, Runyes, Qingdao Zhonglian Hainuo, Acteon,
