Research Summary

Intraoral dental X-ray systems are diagnostic tools used in dentistry to capture detailed images of the teeth and surrounding structures from within the patient's mouth. These systems typically involve the use of X-ray machines with small, specially designed film or digital sensors that are placed inside the oral cavity to capture images. Intraoral X-rays provide dentists with crucial information about tooth decay, periodontal conditions, and other dental issues. There are different types of intraoral X-rays, including bitewing X-rays for detecting interdental cavities and periapical X-rays for assessing the entire tooth structure. Digital intraoral X-ray systems have become increasingly common, offering advantages such as reduced radiation exposure, immediate image availability, and the ability to enhance and share images electronically. These systems are essential for accurate diagnosis and treatment planning in routine dental care and various dental procedures.

The major global manufacturers of Intraoral Dental X-ray Systems include Envista Holdings, Dentsply Sirona, Vatech, Planmeca, Carestream Dental, Morita, Yoshida, Air
