Research Summary

Intrauterine devices (IUDs) are small, T-shaped contraceptive devices that are inserted into the uterus to prevent pregnancy. IUDs are highly effective, long-acting reversible contraceptives that provide a convenient and low-maintenance birth control option for women. There are two main types of IUDs: hormonal IUDs, which release progestin to prevent pregnancy, and copper IUDs, which produce an inflammatory reaction in the uterus that is toxic to sperm, preventing fertilization. IUDs offer a reliable and reversible form of contraception, and their effectiveness can last for several years depending on the type. Once inserted by a healthcare professional, IUDs require little user intervention, making them a popular choice for women seeking a hassle-free and reliable birth control method.

The major global manufacturers of Intrauterine Devices include Bayer, Merck, Teva Pharmaceutical, Allergan, HRA Pharma, Eurogine, Yantai JiShengYaoXie, TianYi, SMB Corporation, Shenyang Liren, H & J Medical, Cooper Companies, AbbVie Allergan, etc. The global players competition landscape in this report is divided into three tiers.
