### Research Summary

Invasive ventilators are medical devices designed to provide mechanical ventilation by delivering breaths directly into the lungs through an artificial airway, such as an endotracheal tube or a tracheostomy tube. These ventilators are used in critical care settings for patients who are unable to breathe adequately on their own due to conditions such as respiratory failure, severe pneumonia, or acute respiratory distress syndrome (ARDS). Invasive ventilation involves the insertion of a tube into the patient's airway, and the ventilator delivers controlled volumes or pressures of air to support breathing. The settings on invasive ventilators can be adjusted to meet the specific respiratory needs of the patient. These devices play a crucial role in supporting oxygenation and carbon dioxide elimination, particularly in intensive care units and during surgical procedures requiring general anesthesia.

The major global manufacturers of Invasive Ventilators include Getinge, Hamilton Medical, Draeger, Mindray, Medtronic, Philips Healthcare, Resmed, Vyair Medical, Lowenstein Medical Technology, Aeonmed, Heyer Medical, EVent Medical, etc. The
