### Research Summary

Invisible orthodontics products refer to a range of orthodontic appliances and treatments designed to straighten teeth and correct dental misalignments discreetly, without the use of traditional metal braces. These products are often preferred by individuals seeking a more aesthetically pleasing and less noticeable orthodontic solution. One of the most well-known types of invisible orthodontics is clear aligner therapy, which involves using a series of custom-made clear plastic trays (aligners) to gradually shift teeth into their desired positions. Clear aligners are removable, making them convenient for eating, brushing, and special occasions. Other invisible orthodontic options may include tooth-colored ceramic braces that blend with natural tooth color, lingual braces attached to the back of teeth, and clear brackets and wires for traditional braces. Invisible orthodontics products offer effective teeth straightening while maintaining a more subtle appearance during treatment, appealing to many patients seeking orthodontic care.
