Research Summary

Invisible orthodontics refers to a modern approach to orthodontic treatment that utilizes nearly invisible or discreet aligners to straighten teeth and correct bite issues. Unlike traditional braces, invisible orthodontic systems, such as clear aligners, are made of transparent materials, making them less noticeable and more aesthetically pleasing. These orthodontic devices are custom-designed for each patient and gradually shift teeth into the desired position over time. One of the most well-known examples of invisible orthodontics is the Invisalign system, which involves a series of clear aligners that are worn over the teeth. Invisible orthodontics has gained popularity for its cosmetic advantages and the convenience it offers, allowing individuals to undergo orthodontic treatment with minimal impact on their appearance and daily activities.

The major global manufacturers of Invisible Orthodontics include 3M, American Orthodontics, Danaher Ormco, Align Technology, Dentsply Sirona, ClearCorrect, DB Orthodontics, G&H Orthodontics, Shanghai Angelalign, Smartee, Irok, BioMers, ClearPath Orthodontics, Geniova, Clarus Company, EZ SMILE, Scheu Dental, etc. The
