Research Summary

Iodine contrast media, also known as iodinated contrast agents, are substances containing iodine that are used in medical imaging procedures to enhance the visibility of specific structures or abnormalities within the body. These contrast media are commonly employed in diagnostic imaging techniques such as X-rays, computed tomography (CT) scans, and angiography. The iodine in the contrast media absorbs X-rays, resulting in increased contrast between the tissues or blood vessels and the surrounding areas, facilitating clearer and more detailed imaging. Iodine contrast media can be injected intravenously, swallowed, or administered through other routes depending on the imaging modality and the area of the body being examined. The use of iodine contrast media is crucial for improving the diagnostic accuracy of medical imaging studies, allowing healthcare professionals to visualize and diagnose a wide range of conditions, from vascular abnormalities to organ dysfunction.

The major global manufacturers of Iodine Contrast Media include GE Healthcare, Bracco Imaging, Bayer, Guerbet Group, Hengrui Medicine, YRPG, BeiLu Pharma,
