### Research Summary

Iodine is a chemical element with the symbol I and atomic number 53. It is a halogen found in the periodic table and is characterized by its distinctive purple-black color in its elemental form. Iodine is an essential trace element for the human body, particularly crucial for the production of thyroid hormones, which play a vital role in regulating metabolism. While iodine is naturally present in some foods, including seafood and certain plants, its availability in soil varies, leading to the introduction of iodized salt as a public health measure to prevent iodine deficiency disorders. Iodine also has applications in various industrial processes, including the production of certain chemicals and as a disinfectant. Additionally, iodine compounds are used in medicine, such as iodine-based contrast agents for medical imaging and iodine supplements for addressing iodine deficiency.

The major global manufacturers of Iodine include SQM, Cosayach, Ise Chemicals, Algorta Norte S.A., Godo Shigen, lochem, Nippoh Chemicals, RB Energy, Toho Earthtech, Iofina, Wengfu, Gather Great Ocean, Xinwang, etc. The global players competition landscape in this report is divided into three tiers.
