### Research Summary

Ion Chromatography is a powerful analytical technique used for the separation and quantification of ions in a liquid sample. It is based on the principle of chromatography, where a sample is passed through a chromatographic column to separate its components. In ion chromatography, the stationary phase consists of ion-exchange resins, and the mobile phase is an electrolyte solution. Ions in the sample are selectively retained and then eluted based on their interactions with the stationary phase. The eluted ions are then detected using various detectors, such as conductivity detectors or UV detectors. Ion chromatography is particularly useful for the analysis of inorganic and organic ions, including common anions and cations, in diverse samples such as water, environmental samples, biological fluids, and pharmaceuticals. This technique is widely employed in analytical laboratories for its high sensitivity, selectivity, and ability to provide accurate and reliable results in ion analysis.

The major global suppliers of Ion Chromatography include Thermo Fisher Scientific, Metrohm, Qingdao Shenghan, Tosoh Bioscience, Shimadzu, Qingdao Ion Chromate

Tograph, MembraPure, Mitsubishi Chemical Analytech, East & West Analytical Instruments, Qingdao Puren Instrument, Qingdao Luhai, Sykam, Cecil Instruments, etc. The global players competition landscape in this report is divided into three tiers.
