### Research Summary

Ion exchange resins are synthetic, polymeric materials with the ability to exchange ions with surrounding solutions. These resins consist of a three-dimensional network of polymer chains containing functional groups that can attract and release ions. Common functional groups include sulfonic acid, carboxylic acid, and amine groups. The ion exchange process involves the replacement of ions in the resin with ions from the surrounding solution, leading to the selective removal or separation of specific ions. Ion exchange resins find widespread use in water treatment, where they can be employed to remove undesirable ions such as heavy metals or soften water by exchanging calcium and magnesium ions. Additionally, ion exchange resins play a crucial role in chromatography, chemical synthesis, and various industrial processes where the controlled exchange of ions is essential for specific applications.

The major global manufacturers of Ion Exchange Resins include DuPont, Purolite, LANXESS, Mitsubishi Chemical, ResinTech, Samyang Corp, Finex Oy, Aldex Chemical Company, Thermax Chemicals, Hebi Higer Chemical, Ningbo Zhengguang, Suqing
