Research Summary

An ionomer is a type of polymer that contains ionic groups within its structure, imparting unique properties related to ion conductivity and interaction with ions. These ionic groups are typically attached to the polymer backbone, allowing the material to exhibit a degree of conductivity when exposed to moisture or specific environments. Ionomers are known for their ion-exchange capabilities, making them valuable in applications such as fuel cells, where they can serve as electrolytes facilitating the movement of ions. Additionally, ionomers are utilized in the production of certain specialty films and coatings, providing enhanced properties like improved adhesion, toughness, and gas barrier performance. The incorporation of ionic functionalities in ionomers allows for tailoring their properties to meet specific application requirements, making them versatile materials in various industrial and research fields.

The major global manufacturers of Ionomer include Dow, SK, Honeywell, Kuraray, DuPont, Asahi Kasei, Asahi Glass, Solvay, Dongyue Group, etc. The global players competition landscape in this report is divided into three tiers.
