Research Summary

IP Video Surveillance, also known as Internet Protocol Video Surveillance, involves the use of digital cameras and network infrastructure to monitor and record video footage for security and surveillance purposes. These systems transmit video data over IP networks, allowing for remote access, real-time monitoring, and efficient storage of video footage. IP Video Surveillance systems offer higher resolution and image quality compared to traditional analog systems. VSaaS (Video Surveillance as a Service) is a related concept that leverages cloud computing to provide video surveillance functionalities as a service. VSaaS allows users to access and manage their video feeds through the cloud, eliminating the need for on-premises storage and infrastructure. This approach offers scalability, flexibility, and cost-effectiveness, as users can subscribe to the surveillance services they need without significant upfront investments in hardware. IP Video Surveillance and VSaaS play a crucial role in enhancing security across various sectors, including commercial, residential, and industrial environments.
