### Research Summary

IR (Infrared) Windows are transparent optical components designed to allow infrared radiation to pass through while providing a protective barrier for equipment such as electrical panels and enclosures. These windows are made from materials that are transparent to infrared wavelengths, typically in the mid-wave or long-wave infrared spectrum. IR windows serve a crucial role in thermography and maintenance inspections by enabling thermal imaging cameras to capture temperature data from inside electrical cabinets without the need to open them. This enhances safety by reducing the risk of arc flash incidents and electrical accidents. IR windows also streamline the inspection process, as they eliminate the need for shutdowns or removal of covers during routine infrared inspections. They are commonly used in industrial settings to monitor the condition of electrical components and ensure the reliability of equipment without exposing personnel to potential hazards.

The major global manufacturers of IR Windows include Fluke Corporation, Teledyne FLIR, IRISS, CorDEX Instruments, Exiscan, LightPath Technologies, Wintech Groupe,

SDMyers, etc. The global players competition landscape in this report is divided into three tiers.
