### Research Summary

Iron, in the context of ferrous sulfate, refers to a chemical compound composed of iron and sulfate ions. Ferrous sulfate is a type of iron supplement commonly used to treat or prevent iron-deficiency anemia, a condition characterized by a lack of red blood cells due to insufficient iron levels. It is often prescribed in both tablet and liquid forms. The ferrous sulfate supplement provides a form of iron that the body can easily absorb and use to produce hemoglobin, a protein in red blood cells that carries oxygen from the lungs to the rest of the body. Iron-deficiency anemia can result from factors such as inadequate dietary iron intake, poor absorption of iron from the diet, or conditions that increase the body's need for iron. Ferrous sulfate supplementation helps replenish iron stores and supports the production of healthy red blood cells, addressing the underlying cause of anemia. It is essential for individuals with diagnosed iron deficiency to follow healthcare provider recommendations regarding dosage and duration of supplementation.

The major global manufacturers of Iron (Ferrous Sulfate) include Venator
