### Research Summary

Irrigation valves are key components in irrigation systems that control the flow of water to different zones or sections within the system. These valves serve as on-off switches, allowing or preventing the passage of water to specific areas, such as individual sprinkler zones or drip irrigation lines. Typically installed underground or in valve boxes, irrigation valves are actuated by an irrigation controller to open or close based on the programmed watering schedule. There are various types of irrigation valves, including globe valves, diaphragm valves, and solenoid valves, each with specific features and applications. Solenoid valves, for instance, are commonly used in automated irrigation systems and can be controlled electronically for precise water distribution. The use of irrigation valves enables the efficient and customized delivery of water to different parts of a landscape, agricultural field, or garden, contributing to effective water management and conservation.

The major global manufacturers of Irrigation Valves include Ace Pump, AKPLAS, Banjo, Cepex, Comer Spa, DICKEY-john, Elysee Rohrsysteme GmbH, Eurogan, Hunter
