Research Summary

ISO and ANSI pumps refer to two different standards for centrifugal pumps widely used in various industries. ISO (International Organization for Standardization) and ANSI (American National Standards Institute) are organizations that establish standards for industrial equipment to ensure compatibility and interchangeability. ISO pumps adhere to international standards set by ISO, while ANSI pumps adhere to standards established by ANSI. These standards cover dimensions, performance criteria, and design features of centrifugal pumps, facilitating consistency and compatibility across different manufacturers. ISO pumps are more prevalent in global markets, while ANSI pumps are commonly used in North America. Both types of pumps serve similar purposes, such as transferring liquids in industrial processes, and their standardization allows for easier selection, installation, and maintenance of pumps in a range of applications. The choice between ISO and ANSI pumps often depends on regional preferences, industry standards, and project specifications.

The major global manufacturers of ISO and ANSI Pumps include Flowserve, KSB,
