Research Summary

Isoamylene, also known as isoprene or 2-methyl-2-butene, is a hydrocarbon compound with the molecular formula C_5H_{10} . It is an unsaturated branched alkene, consisting of five carbon atoms arranged in a branched structure. Isoamylene is often found in crude oil and can be obtained as a byproduct in certain industrial processes, particularly in the production of butyl rubber. This compound is highly flammable and has applications in various industries. Isoamylene is utilized as a starting material in the synthesis of chemicals and polymers. Its reactivity and chemical properties make it valuable in the production of additives, resins, and synthetic rubber. Additionally, isoamylene is involved in the synthesis of pharmaceuticals and can be used as a chemical intermediate in the manufacturing of various products.

The major global manufacturers of Isoamylene include Chevron Phillips Chemical, INEOS Oligomers, Zibo Liantan Chemical, Shanghai Petrochemical, Jinhai Chenguang, etc. The global players competition landscape in this report is divided into three tiers.
