Research Summary

Isododecane is a hydrocarbon compound with the chemical formula $C_{12}H_{26}$. It is a branched-chain isomer of dodecane and belongs to the group of alkanes. Isododecane is a colorless and odorless liquid with a high boiling point, making it volatile and easily evaporable. This chemical property, along with its lightweight and non-greasy nature, makes isododecane a popular ingredient in the cosmetics and personal care industry. It is commonly used in the formulation of cosmetics, skincare products, and hair care products such as foundations, primers, sunscreens, and leave-on conditioners. Isododecane acts as a solvent and helps enhance the texture, spreadability, and long-lasting properties of these products. Its quick evaporation on the skin contributes to a smooth, lightweight feel without leaving a heavy residue. Isododecane's versatility and compatibility with various formulations make it a valuable ingredient in the development of cosmetic and personal care formulations.

The major global manufacturers of Isododecane include Ineos, Lanxess, Idemitsu Kosan, ZMPC, etc. The global players competition landscape in this report is divided
