Research Summary

Isolation hangers are mechanical components designed to provide vibration isolation and damping in buildings and industrial structures. These hangers are typically used to support and suspend heavy equipment, machinery, piping, or ductwork, helping to reduce the transmission of vibrations and noise to the surrounding structure. Isolation hangers often consist of a combination of springs, rubber mounts, or other resilient materials that absorb and isolate the mechanical vibrations generated by the equipment. This isolation is crucial in applications where minimizing vibrations is essential to prevent structural damage, noise disturbance, or to meet specific operational requirements. Isolation hangers find applications in various industries, including HVAC systems, manufacturing facilities, and power plants, contributing to improved equipment performance and overall structural integrity.

The major global manufacturers of Isolation Hangers include Mason Industries, Eaton, Carpenter?Paterson, Kinetics Noise Control, Cdm, Ductmate, Acoustical Solutions, ANDRE HVAC, CMS Vibration Solutions, Sunpower Group, Nantong Juli Electric Power
