Research Summary

An isolation IC, or isolation integrated circuit, is a type of semiconductor device used to provide electrical isolation between two circuits while allowing communication or signal transfer between them. These ICs are commonly used in electronic systems to ensure safety, reduce noise, and prevent ground loops. Isolation ICs typically consist of two separate sections, each connected to one of the circuits to be isolated. These sections are electrically isolated from each other, often using techniques such as optocouplers, transformers, or capacitive coupling. Despite the isolation, signals can still pass between the circuits through various means, such as light (in optocouplers), magnetic induction (in transformers), or capacitive coupling. Isolation ICs are widely used in applications such as industrial automation, power supplies, medical devices, and communication systems, where maintaining electrical isolation is crucial for reliable and safe operation.

The major global manufacturers of Isolation IC include Skyworks (Silicon Lab), TI, ADI, Broadcom, Infineon, MAXIM, Vicor, ROHM, Onsemi, NVE, ST, NOVOSENSE, Shanghai Chipanalog Microelectronics, Shanghai Belling, 3PEAK, etc. The global

players competition landscape in this report is divided into three tiers.
