Research Summary

Isolator gloves, also known as isolation gloves, are specialized gloves designed for use in environments where protection against electrical hazards is essential. These gloves are made from materials that provide electrical insulation, typically natural rubber or other dielectric materials. Isolator gloves are used by electricians and other professionals working with live electrical equipment to prevent electric shock and ensure personal safety. They are part of personal protective equipment (PPE) and are often used in conjunction with other safety measures, such as insulating mats and barriers, when working on or near live electrical circuits. Isolator gloves are rigorously tested and must comply with industry standards to ensure their effectiveness in providing electrical insulation. Proper care and regular inspection are crucial to maintaining the integrity of isolator gloves, and they are typically color-coded to indicate the level of protection they offer.
