Research Summary

Isoleucine is an essential amino acid that plays a vital role in protein synthesis and various physiological processes in the human body. As one of the branched-chain amino acids (BCAAs), isoleucine cannot be synthesized by the body and must be obtained through diet. It is involved in promoting muscle protein synthesis, enhancing energy production, and supporting immune function. Isoleucine is commonly found in protein-rich foods such as meat, fish, eggs, dairy products, and certain plant-based sources like soy and legumes. Along with leucine and valine, isoleucine is crucial for maintaining muscle health, aiding in recovery after exercise, and contributing to overall well-being. The balanced intake of BCAAs, including isoleucine, is often emphasized in sports nutrition and dietary planning to support optimal health and physical performance.

The major global manufacturers of Isoleucine include Ajinomoto, Kyowa Hakko, Evonik, Amino GmbH, Fufeng Group, Yichang Sanxia Pharmaceutical, Wuxi Jinghai Amino Acid, Meihua Group, Jiahe Biological Technology, Bafeng Pharmaceutical & Chemical, etc. The global players competition landscape in this report is divided into three tiers.
