### Research Summary

Isomalt is a sugar substitute and sugar alcohol derived from beet sugar. It is commonly used as a low-calorie sweetener and sugar replacer in various food products, particularly in sugar-free candies, chocolates, and baked goods. Isomalt provides sweetness similar to sugar but with approximately half the calories. One of its notable properties is its resistance to heat, making it suitable for baking and cooking without losing its sweetness or causing caramelization. Isomalt also has a low glycemic index, meaning it does not cause a rapid increase in blood sugar levels, making it suitable for people with diabetes or those following a low-carbohydrate diet. Additionally, isomalt is tooth-friendly and does not contribute to tooth decay. However, excessive consumption may cause gastrointestinal discomfort or laxative effects in some individuals.

The major global manufacturers of Isomalt include Cargill, Incorporated, Merck KGaA, BENEIO, Wilmar Sugar Pty Ltd, Sinofi Ingredients, Evonik Industries AG, Advance Inorganics, Radiant International, Roquette Freres, Ingredion, Akhil Healthcare, etc. The global players competition landscape in this report is divided into three tiers.
