Research Summary

Isomaltulose, also known as Palatinose™, is a disaccharide carbohydrate derived from beet sugar. It consists of glucose and fructose molecules linked together in a specific way that makes it a slowly digestible form of sugar. Isomaltulose is considered a low-glycemic sweetener because it is digested and absorbed more slowly than sucrose (table sugar). This slow digestion results in a gradual and sustained release of glucose into the bloodstream, leading to a more stable and prolonged supply of energy. Isomaltulose has a similar sweetness to sucrose but with a slightly different taste profile, often described as less sweet and without the quick rise and fall in blood sugar levels associated with sucrose consumption. Due to its low glycemic index and sustained energy release, isomaltulose is used in various food and beverage products, including sports drinks, energy bars, cereals, and beverages aimed at providing long-lasting energy and promoting stable blood sugar levels. Additionally, isomaltulose is tooth-friendly and does not contribute to tooth decay.

The major global manufacturers of Isomaltulose include Mitsui DM Sugar, S?dzucker

AG?Beneo), Qingdao Honeycon Biochemistry Co.,Ltd, Guangxi Vector, Shandong Lvjian Biotechnology Co., Ltd., Shandong Bailongchuang Biotech Co., Ltd., etc. The global players competition landscape in this report is divided into three tiers.
