Research Summary

Isoparaffin solvents are a group of hydrocarbon solvents characterized by their isoparaffinic structure, meaning they consist predominantly of branched-chain alkanes (paraffins or hydrocarbons). These solvents are derived from petroleum and are known for their high purity, low odor, and excellent solvency properties. Isoparaffin solvents find wide use in various industrial applications such as cleaning, degreasing, and as carriers in formulations for products like paints, coatings, and adhesives. Due to their relatively low toxicity and favorable environmental profile, isoparaffin solvents are often chosen as alternatives to traditional solvents in formulations where regulatory compliance and worker safety are priorities. The specific boiling range and composition of isoparaffin solvents can be tailored for different applications, providing versatility in meeting the requirements of diverse industries.
