### Research Summary

An isopentane and normal pentane blend is a mixture of two hydrocarbons: isopentane and n-pentane (normal pentane). Isopentane is an isomer of pentane, and the blend combines both isomeric forms. These hydrocarbons belong to the paraffinic group and are commonly used as components in various industrial processes. The blend's specific composition can be tailored for different applications based on the desired properties. Isopentane and normal pentane blends are often employed as blowing agents in the production of polyurethane foams, where they contribute to the expansion and formation of cellular structures in the foam. Additionally, they find use as solvents in industries such as adhesives, coatings, and extraction processes. The combination of isopentane and normal pentane provides a versatile solution with properties suitable for specific industrial requirements, offering a balance between reactivity, volatility, and solvency.

The major global manufacturers of Isopentane and Normalpentane Blend include Shell, Phillips 66, CNPC, ExxonMobil Chemical, TOP Solvent, Junyuan Petroleum Group,
