Research Summary

Isophorone is a colorless to pale-yellow liquid with a distinct odor and the chemical formula C₉H₁₄O. It is a cyclic ketone derived from acetone and is known for its versatility in industrial applications. Isophorone is commonly used as a solvent in the production of paints, coatings, adhesives, and inks due to its excellent solvency properties. Its relatively high boiling point and low volatility make it valuable for formulations requiring extended drying times. Isophorone is also utilized in the synthesis of certain polymers, resins, and as a component in the manufacturing of pesticides. Its chemical characteristics, including a stable cyclic structure, contribute to its effectiveness in various processes, making isophorone an essential compound in the chemical and coatings industries.

The major global manufacturers of Isophorone include Evonik, Arkema, SI Group, Wanhua, Prasol, etc. The global players competition landscape in this report is divided into three tiers.
