Research Summary

Isophthalonitrile (INP) is a chemical compound with the molecular formula $C_8H_4N_2$. It is a nitrile derivative of isophthalic acid and is characterized by its aromatic ring structure. Isophthalonitrile is a key intermediate in the production of high-performance polymers, particularly aramid fibers such as meta-aramid and para-aramid. These aramid fibers are known for their exceptional strength, heat resistance, and flame-retardant properties, making them valuable in applications such as protective clothing, aerospace components, and bullet-resistant materials. Isophthalonitrile undergoes polymerization reactions to form polymeric chains with specific properties that contribute to the strength and durability of aramid materials. The unique characteristics of aramid fibers derived from isophthalonitrile make them suitable for a wide range of demanding applications where high-performance materials are required.

The major global manufacturers of Isophthalonitrile (INP) include Mitsubishi Gas Chemical, CAC Group, Suli, Syngenta, SDS Biotech, Sipcam-Oxon, Showa Denko, Jiangsu Weunite Fine Chemical, etc. The global players competition landscape in this
