Research Summary

Isosorbide is a bicyclic sugar alcohol derived from D-sorbitol. It is a versatile compound known for its applications in both the pharmaceutical and polymer industries. In pharmaceuticals, isosorbide is used in the synthesis of medications such as isosorbide dinitrate and isosorbide mononitrate, which are commonly prescribed for the treatment of angina and heart-related conditions. Isosorbide's vasodilator properties contribute to its effectiveness in improving blood flow. In the polymer industry, isosorbide serves as a building block for the production of biodegradable polymers, offering an eco-friendly alternative to traditional petrochemical-based plastics. These biodegradable plastics find applications in various products, including packaging and medical devices. Isosorbide's dual role in pharmaceuticals and sustainable materials underscores its significance in contributing to both human health and environmental conservation efforts.

The major global manufacturers of Isosorbide include Roquette, SK Holdings, Ecogreen Oleochemicals, ADM, Novaphene, Yu Teng, Hongbaifeng, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises
