Research Summary

A jacket pile gripper is a specialized mechanical device used in the construction and installation of piles, particularly in offshore and marine construction projects, to securely hold and stabilize a pile jacket during the pile driving or placement process. The pile jacket, which is a tubular structure that protects the pile, is gripped by the device to prevent it from shifting or rotating while being lowered into position or driven into the seabed. The gripper typically consists of adjustable clamps or jaws that can be tightened around the pile jacket, providing a secure and controlled grip during installation. Jacket pile grippers are essential in ensuring accurate alignment, preventing misalignment or damage to the pile during the installation process, and are commonly used in projects such as offshore oil platforms, wind turbine foundations, and marine infrastructure.

The major global manufacturers of Jacket Pile Gripper include IQIP, Oil States, F.Lli Righini Srl, Huisman, IRM Offshore and Marine Engineers Private Limited, Imenco, Trelleborg, Temporary Works Design (TWD), De Pretto Industrie, CSSC, HiTech
