Research Summary

A Jacquard machine is a mechanical device used in textile manufacturing to control the pattern of woven fabrics. Named after its inventor, Joseph Marie Jacquard, the machine automates the process of producing intricate patterns and designs on textiles. It operates by using a series of punched cards laced together to control the movement of individual warp yarns. The punched cards act as a set of instructions, determining which warp threads should be lifted or lowered during the weaving process, thereby creating a specific pattern. Jacquard machines revolutionized the textile industry by enabling the mass production of complex woven designs, such as brocades and damasks. This technology played a significant role in the development of automated weaving and contributed to the advancement of textile arts during the Industrial Revolution.

The major global manufacturers of Jacquard Machine include Pailung, Baiyuan Machine, Mayer & Cie, Terrot, Santoni, Fukuhara, Tayu, Wellknit, Orizio, Hang Xing, Hengyi, Hongji, Taifan, Sanda, Unitex, Nan Sing Machinery, Jiunn Long, Welltex, Fukuhama, Santec, etc. The global players competition landscape in this report is
