### Research Summary

A jaundice meter, also known as a bilirubin meter or transcutaneous bilirubinometer, is a medical device used to measure the levels of bilirubin in a person's skin non-invasively. Bilirubin is a yellow pigment produced during the breakdown of red blood cells and can accumulate in the body, leading to jaundice, a condition characterized by yellowing of the skin and eyes. The jaundice meter works by emitting light onto the skin, and the reflected light is then analyzed to determine the concentration of bilirubin. This non-invasive method is particularly useful in neonatal care, allowing healthcare professionals to monitor jaundice levels in newborns without the need for blood tests. Jaundice meters provide a quick and accurate assessment, enabling timely interventions if necessary, and are a valuable tool in managing conditions associated with bilirubin imbalance, especially in infants.

The major global manufacturers of Jaundice Meter include Dr?ger, Delta Medical International, Xuzhou Kejian Hi-tech, Aegis Medicals, Natus Medical, Refine Medical Technology, M&B, Micro Lab, etc. The global players competition landscape in this
