Research Summary

L-Alanine is a naturally occurring, non-essential amino acid that plays a crucial role in the synthesis of proteins. It is classified as an alpha-amino acid, meaning it contains an amino group and a carboxyl group, both attached to the same carbon atom. L-Alanine is one of the 20 amino acids that constitute the building blocks of proteins. It is involved in various biochemical processes in the body, including energy production, immune system function, and the regulation of glucose metabolism.
