Research Summary

Laboratory Developed Tests (LDTs) are diagnostic tests that are designed, developed, and performed within a single laboratory, typically for the purpose of providing information about a patient's health or a specific medical condition. These tests are created by clinical laboratories and are not commercially manufactured or distributed. LDTs cover a wide range of diagnostic areas, including genetic testing, molecular diagnostics, and specialized clinical assays. Laboratories developing these tests are responsible for validating and ensuring the accuracy, precision, and clinical utility of the assays. While LDTs play a crucial role in offering innovative and customized diagnostic solutions, they have also been a subject of regulatory discussions to ensure their reliability and consistency. The regulatory landscape for LDTs may vary, and regulatory bodies aim to strike a balance between promoting innovation and ensuring patient safety and test reliability.

The major global suppliers of Laboratory Developed Tests (LDT) include Quest Diagnostics, Thermo Fisher, Waters Corporation, Roche, Illumina, Qiagen, Eurofins,
