### Research Summary

Lactase is an enzyme that plays a crucial role in the digestion of lactose, a sugar found in milk and dairy products. It belongs to the class of enzymes known as beta-galactosidases. Lactase breaks down lactose into its component sugars, glucose and galactose, which can then be easily absorbed by the small intestine. The production of lactase is typically high in infants, allowing them to digest breast milk or formula. However, in many mammals, including some humans, lactase production decreases with age, leading to lactose intolerance. Individuals with lactose intolerance may experience digestive discomfort after consuming dairy products. Lactase supplements are available to aid in the digestion of lactose for those with lactose intolerance, allowing them to enjoy dairy without adverse effects. Additionally, lactase is widely used in the food industry to break down lactose during the production of lactose-free dairy products.

The major global manufacturers of Lactase include DSM, Novozymes, DuPont, Chr. Hansen Holding, Amano Enzyme, Enzyme Development, SternEnzym, Specialty Enzymes & Biotechnologies, Enzyme Solutions, Advanced Enzymes, Enze Bio, Zhongnuo BioTech, Meihua BioTech, Kono Chem, etc. The global players competition
