Research Summary

Lactoferrin and lactoperoxidase are two proteins found in milk, each with distinct biological functions. Lactoferrin is an iron-binding glycoprotein known for its antimicrobial properties. It plays a role in the innate immune system, inhibiting the growth of bacteria by sequestering iron, an essential nutrient for microbial proliferation. Lactoferrin is also involved in modulating the immune response and promoting intestinal health. Lactoperoxidase, on the other hand, is an enzyme that catalyzes the oxidation of various substrates in the presence of hydrogen peroxide. In the context of milk, the lactoperoxidase system is part of the natural defense mechanism, helping to preserve the quality of raw milk by inhibiting the growth of undesirable microorganisms. Both lactoferrin and lactoperoxidase contribute to the overall protective and nutritional properties of milk, showcasing the complexity and functionality of bioactive compounds in this essential food source.

The major global manufacturers of Lactoferrin and Lactoperoxidase include Fonterra, Bega Cheese, FrieslandCampina (DMV), Tatura, Westland Milk, Milei, Synlait Milk,
