Research Summary

Laminated glass is a type of safety glass composed of two or more layers of glass bonded together with an interlayer of polyvinyl butyral (PVB) or ethylene-vinyl acetate (EVA). The layers are permanently fused through a process of heat and pressure, creating a strong and durable composite material. What sets laminated glass apart is its ability to hold together even when shattered, due to the interlayer that remains intact. This safety feature reduces the risk of injury from broken glass fragments. Laminated glass is widely used in applications where safety and security are paramount, such as automotive windshields, building windows, and glass doors. Additionally, it provides benefits such as sound insulation and UV protection, making it a versatile choice in various architectural and industrial contexts.

The major global manufacturers of Laminated Glass include AGC Glass, Saint-Gobain, Guardian, CSG Holding, Nippon Sheet Glass, Vitro Architectural Glass, Sisecam Group, Fuyao Group, Taiwan Glass, Viridian, Schott, Benxi Yujing Glass, Carey Glass, JE Berkowitz, Lami Glass, etc. The global players competition landscape in this report is
