Research Summary

Laminated steel refers to a composite material typically used in the manufacturing of various products, particularly for packaging applications. It involves the lamination of multiple layers of materials, commonly steel, polymer films, and sometimes aluminum. The lamination process creates a strong and versatile material that exhibits properties such as strength, durability, and resistance to external factors like corrosion. Laminated steel is often employed in the production of packaging for food and beverages, providing a protective and secure solution for preserving the contents. The combination of steel's strength with the added features of laminated layers makes it suitable for diverse applications, ensuring the integrity of packaged goods and meeting industry standards for safety and hygiene.

The major global manufacturers of Laminated Steel include Toyo Kohan, NSSMC, Tata steel, JFE, TCC Steel, ORG, Lienchy, ThyssenKrupp Steel., Guangyu, Metalcolour, Gerui, Leicong, Arena Metal, etc. The global players competition landscape in this report is divided into three tiers.
