### Research Summary

A laminated steel sheet refers to a composite material made by bonding together multiple layers of steel sheets with adhesive or heat and pressure processes. The layers can consist of different types of steel, such as low-carbon steel, stainless steel, or alloy steel, depending on the desired properties of the final product. The lamination process helps improve the mechanical, thermal, and corrosion-resistant properties of the steel sheet. Laminated steel sheets are commonly used in various industries such as automotive, construction, aerospace, and electrical appliances due to their enhanced strength, durability, and versatility. They can be further processed through techniques like stamping, welding, or coating to create finished components or products with specific performance characteristics required for different applications. Common examples of laminated steel products include automotive body panels, roofing materials, electrical transformers, and kitchen appliances.

The major global manufacturers of Laminated Steel Sheet include Toyo Kohan, Tata Steel, NSSMC, JFE Steel, TCC Steel, ThyssenKrupp Steel, ORG Technology, Baosteel
