### Research Summary

A laminating machine is a device used to apply a protective layer of plastic film onto documents, photographs, or other materials through a process known as lamination. The machine typically consists of rollers, a heating element, and pressure settings to ensure proper bonding of the laminating film to the item being laminated. The laminating process involves feeding the material and the laminating film into the machine, which then heats the film, allowing it to adhere securely to the surface of the document. This protective layer adds durability, moisture resistance, and a glossy finish to the laminated items. Laminating machines are widely used in offices, schools, print shops, and other settings where preserving and enhancing the longevity of documents or visuals is important. They come in various sizes and configurations, catering to different lamination needs, from small ID cards to large posters and banners.

The major global manufacturers of Laminating Machine include Wenzhou Guangming, GMP, Zhejiang Liming, Shanghai Loretta, Beijing Kangdexin, Shanghai Dragon, Autobond, Guangdong Magnolia, KOMFI, New Star, Shenzhen Modern Domhke,
