Research Summary

Lancets are small, sharp-pointed instruments designed for medical and diagnostic purposes, specifically for obtaining small blood samples through a quick and minimally invasive procedure known as fingerstick or heelstick. These devices are commonly used for blood glucose monitoring in individuals with diabetes. A lancet is a tiny, sterile needle housed within a protective casing. When the lancet is pressed against the skin, the needle punctures the skin's surface, allowing a small droplet of blood to be collected for glucose testing. Lancets come in various gauges, depths, and designs to accommodate different skin types and patient preferences. They are an essential tool for regular blood sampling, providing a convenient and relatively painless method for individuals to monitor their blood glucose levels at home or in healthcare settings.
